

To Whom It May Concern

Technical Department, Protection and Substation Automation Division of ABB Ltd, has been using **MIPOWER** since December , 1997 for the purpose of fault calculations and Relay Setting Co-ordination and study. We have used the modules Relay co-ordination and Short circuit studies for arriving at proper relay co-ordination in a number of projects. We wish to state that the performance of the software has been more than adequate in meeting our requirements. Use of this software has resulted in time reduction and accuracy in calculation. PRDC has been extending good services in terms of upgradation and training of our personnel and keeping us aware of the new features.

Thanking You,
Yours Truly

Narayanan. R
Deputy Manager- Technical
Protection and Substation Automation
